Nefab lightweight pallet

Ideal pallet for Air Freight

Expendable pallets are frequently used all over the world. Nefab is able to provide customized, environmentally friendly solutions for applications worldwide.

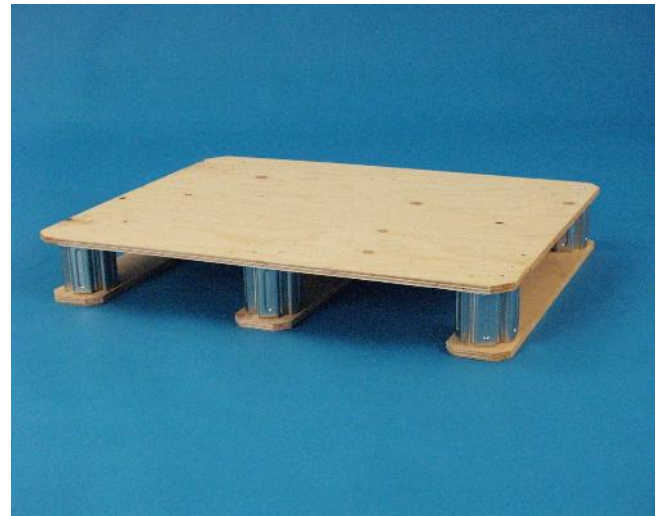

The Nefab lightweight pallet is an excellent load carrier for heavy goods that need a strong and durable packaging solution. Nefab's lightweight plywood pallet can be reused several times but could also be sold as an integrated part of the box.

The plywood deck has smooth, clean surface and low moisture absorption. Another major advantage is the low weight yet good strength.

Plywood is not considered a phytosanitary problem according to international regulations; therefore the pallet can be shipped to any destination. The plywood deck and the steel cylinders are manufactured in standard footprints of 1,200 x 800 mm and 600 x 800 mm, which weigh respectively 10.1 kg and 5.4 kg. Nefab can customise lightweight pallets up to 3100 mm.

Main characteristics of expendable Nefab's plywood pallets are summarized below:

- high strength and stiffness to weight ratio,
- strong and durable,
- resistance to impact and short term overloads,
- good dimensional stability under changes in moisture content,
- suitable for storing in racks,
- ease of repair.

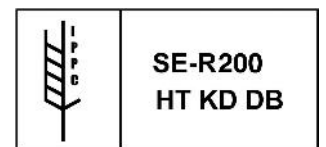

Steel cylinders are very durable

Plywood pallets are light and strong

Light weight pallets are suitable for storing in racks

Plywood pallets do not require export treatment
